FOREWORD

This handbook revises and updates ER H 68–3, The Cuban Economy: A Statistical Review, 1955-67, October 1968. The principal changes are: (a) revision of provisional data for 1965-67 and addition of data for 1968; (b) revision of the national accounts statistics back to 1961, mainly to reflect new information on private consumption based on analysis of a large sample of family budgets reported by refugees; (c) conversion of the data on raw sugar production, consumption, and stocks to a 96° polarization basis to achieve comparability with world sugar statistics published by the International Sugar Council; (d) revision of the statistics on drawings against Soviet balance-of-payments credits to include estimated interest charges on the debt outstanding; and (e) revision of population data based on new U.S. Bureau of Census estimates. The statistics on the government budget and the civilian labor force have not been updated, because no new information is available.

The handbook is intended to provide a wide range of statistics of general interest on the Cuban economy in a convenient format. Statistics for 1959 and 1960—the two years immediately following the revolution in January 1959—are excluded because of the scarcity and unreliability of information. For similar reasons, the statistics for 1961 are the least reliable of the series shown and should be used with caution.

The statistics were obtained from a wide variety of sources. They have been checked carefully for internal consistency and, on the whole, are judged to be reasonably reliable. Most reliable are the statistics on foreign trade, for which cross checks with the statistics of Cuba's trading partners were made.

The data on the production of most sectors of the economy also are fairly reliable, those on the production and disposition of sugar being the most accurate. The data on the output of manufactured products also are numerically accurate, but their significance is impaired somewhat by a decline in the quality of many manufactured goods since the revolution. The data on the production of food crops in the years since the revolution refer only to state collections. In the aggregative measure of agricultural output, however, data on state collections were supplemented by estimates of consumption by farm households and of private sales. These estimates are based on information on food consumption for a sample of farm families and on the volume of black market food sales.

Statistics on drawings of credits extended by Communist countries were derived from the commodity trade deficits, taking account of estimated Cuban expenditures for invisibles such as the wages of technicians supplied by Communist countries, interest payments, and movements of short-term capital. The allocation of drawings between development aid and balance-of-payments credits, however, is only a rough approximation.

Estimates of gross national product (GNP) by sector of origin and by expenditure category in current prices were derived from a variety of sources, including estimates of the UN Economic Commission for Latin America that were based on data supplied by the Cuban government. A first approximation of

Approved For Release 1999/09/21 : CLACREDP79S01091A000200020001-7

GNP in constant (1957) prices was obtained by constructing volume indexes for each sector of origin. These estimates of GNP were then adjusted downward on the basis of independent estimates of GNP for 1965-66 by expenditure category in 1957 prices. The adjustments were applied to the estimates for industry and agriculture (both excluding sugar) and for services—which are most subject to upward bias.

In this handbook the term *Eastern Europe* is used to refer to Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and Yugoslavia.

Although the overall classification of this handbook is SECRET/NO FOREIGN DISSEM, some of the tables are unclassified. Therefore, each of the tables carries a footnote which specifies the classification.

^{*} All data in this table are unclassified.

^b Raw sugar of 96° polarization.

[•] Equals raw sugar of 96° polarization plus the raw sugar equivalent of refined sugar produced. Refined sugar is converted to a raw sugar basis by applying the factor 92 parts refined to 100 parts raw. Because the production data in this table refer to calendar years, they differ in some instances from the data for crop years in Table 6.

d In 1957 and 1961-67, almost all of this category consisted of blackstrap molasses. In 1958, however, between 30 and 55% of the category represented rich inverted molasses and a small amount of syrup.

e Estimated.

^b Raw sugar of 96° polarization. Because the production data in this table refer to calendar years, they differ in some instances from the data for crop years in Table 6.

^b State-owned carriers only. Small amounts of freight were handled by private carriers.

^e Common carriers only. The sugar mill railroad systems sometimes employ the common carrier tracks for short distances. Because of the short haul, however, revenue from this traffic is negligible, and, therefore, sugarcane has been excluded.

Less re-exports to Free World	390	820	1,400	1,340	840	1,350	1,970	1,850	1,740
Net imports	1,780	4,050	2,480	760	1,780	2,000	1,340	2,050	1,385

All data in this table are unclassified. Data for imports are those reported by the importing countries. In most cases, these figures differ little from the export data reported by Cuba which are shown in Table 29. Data for re-exports were estimated as follows: for those countries having net exports of sugar, all sugar imports from Cuba were regarded as re-exported; for those countries having net imports of sugar, all sugar exports were regarded as re-exports and the share of Cuban sugar in these re-exports was estimated as that proportion of the countries' total sugar imports obtained from Cuba. Data for imports are rounded to the nearest five thousand metric tons and data for re-exports are rounded to the nearest ten thousand metric tons.

All data in this table are unclassified. The credits shown in this table exclude those for the purpose of refinancing earlier credits. In recent years substantial amounts have been extended for refinancing purposes, usually as part of general balance-of-payments assistance.

 $^{^{\}mathrm{b}}$ The official exchange rate is one peso per US dollar.

[°] In the case of the USSR, balance-of-payments credits are shown as extended during the period in which the trade deficit to be financed was accumulated and since 1963 include estimated interest accrued on outstanding debt. In some cases formalization of the credit did not take place until the year following that in which the deficit occurred.

o Provisional

d Including estimated interest accrued at 2.5 percent annually on the outstanding balance of debt to the USSR as of 31 December of the preceding year. Interest obligations to the other countries individually are insignificant and are thus omitted.

Originally part of a \$15 million development credit extended in 1961 (see Table 32).

The value of sugar subsidy payments in each year was estimated as the difference between the value of sugar exports to Communist countries as reported by Cuba and the value of these exports computed at the average price received for Cuban sugar from Free World countries (see Table 31).

^a All data in this table are unclassified. The projects listed were supplied with equipment imported from the indicated donor country; in most instances, all or part of the foreign exchange costs of the project were financed with credits from the donor

b Values represent the total cost of the projects, including the local construction costs.

[•] One of the three planned production lines began operation in April 1968. When the second and third lines are completed (by the end of 1969 and 1970, respectively) total capacity will amount to 620,000 metric tons annually.

⁴ The first of four planned production lines began operation in June 1969. Total capacity will amount to 670,000 metric tons annually when the four are completed.

The first of two scheduled 30 megawatt generators began operation in early 1969.

[!] The first of two scheduled 60 megawatt generators began operation in May 1969.

Other taxes	d	76	19	9	9	12
Non-tax revenues	d	165	178	146	182	137
Income from the banking system	d		211			202
Total	330	1,854	2,196	2,399	2,536	2,745

- * All data in this table are unclassified. Revenues in most years are believed to have fallen considerably short of the levels called for in the planned budgets. Available information is not adequate to permit an estimate of actual revenues.
 - ^b The official exchange rate is one peso per US dollar.
 - o Fiscal year ending 30 June 1957.
 - ^d The classification of revenues before 1959 does not correspond to that used since the revolution.

Table 38

Planned Budget Expenditures of the Central Government, by Major Category *

	195 7 °		1962		Million Current Pesos b		
		1958 °		1963	1964	1965	1966
Development of the economy	20	45	703	891	945	878	992
Social services, science, and culture	130	98	569	617	681	696	821
Housing and community services	$N.A.^{ m d}$	$N.A.^{ m d}$	$N.A.^{\mathfrak{d}}$	106	130	136	133
Public administration	89	83	195	150	156	137	136
National defense and public order	55	94	247	213	221	213	213
Servicing the public debt	36	40	116	116	157	163	174
Reserves	0	5	24	103	109	313	276
Total	330	365	1,854	2,196	2,399	2,536	2,745

- All data in this table are unclassified. Expenditures, particularly those for the development of the economy, are believed to have fallen short of the levels called for in the planned budgets in most years. Available information is not adequate to permit an estimate of actual expenditures.
 - ^b The official exchange rate is one peso per US dollar.
 - Fiscal years ending 30 June of the year shown.
- d Expenditures for housing and community services are included in expenditures for development of the economy and probably totaled less than \$5 million annually in 1957 and in 1958.
